

NEW CLINICAL DATA SHOWS EFFICACY OF VERISOL® COLLAGEN SUPPLEMENTATION TO FIGHT CELLULITE

CELLULITE AFFECTS UP TO 85% OF WOMEN AFTER PUBERTY.

It is caused by the accumulation of fat under a weak skin structure, resulting in the characteristic 'orange peel skin': appearance of dimples in the thighs, hips, buttocks and belly.

VERISOL® COLLAGEN
Helps reduce the orange peel appearance and softens the dimples of the skin affected by cellulite, acting from the inside out.

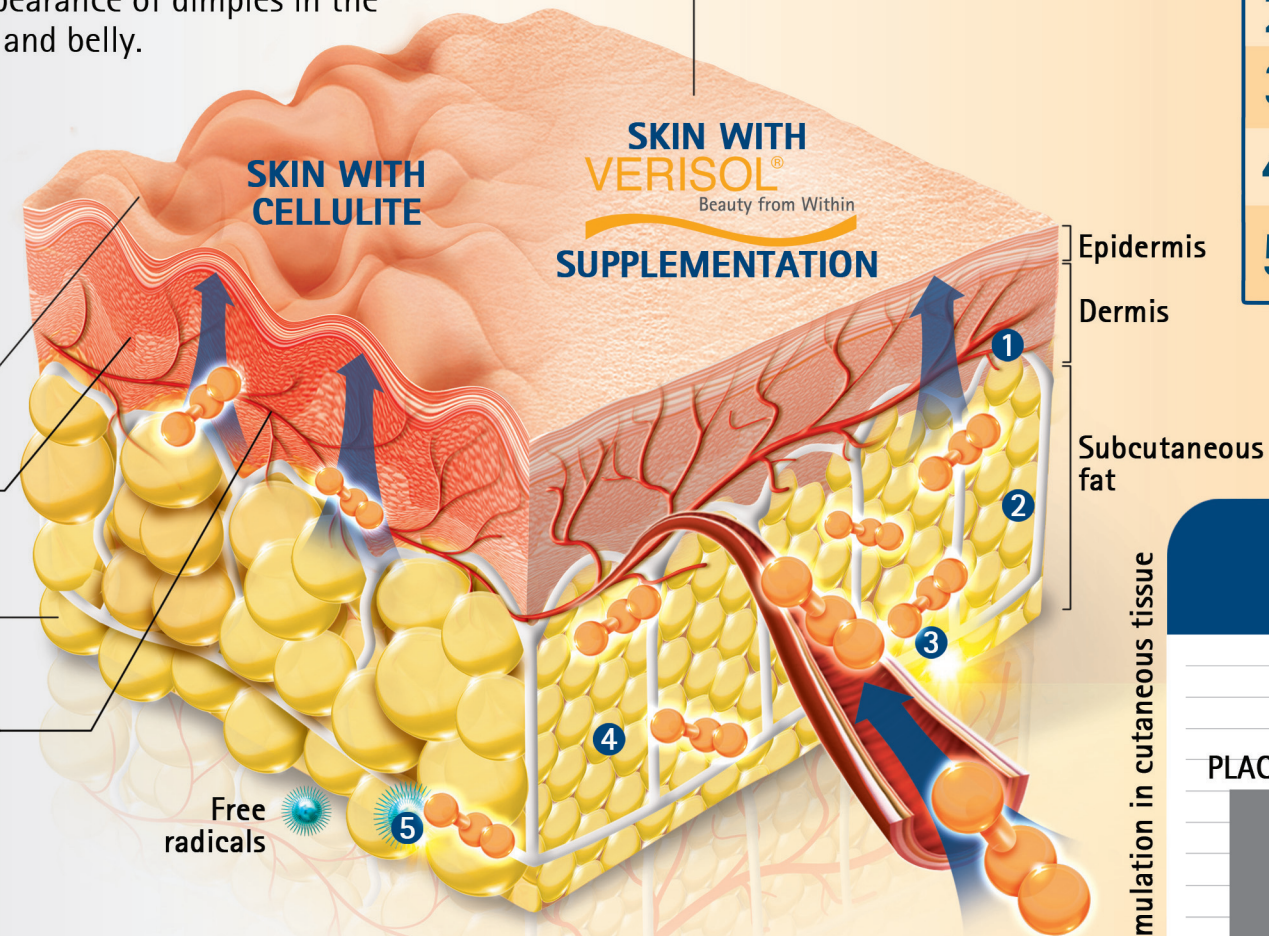

CHARACTERISTICS AND CAUSES OF CELLULITE

Dimples on the skin
(orange peel appearance)

Weak dermal collagen structure
(dermal matrix disturbances)

Accumulation of fat
(adipose tissue)

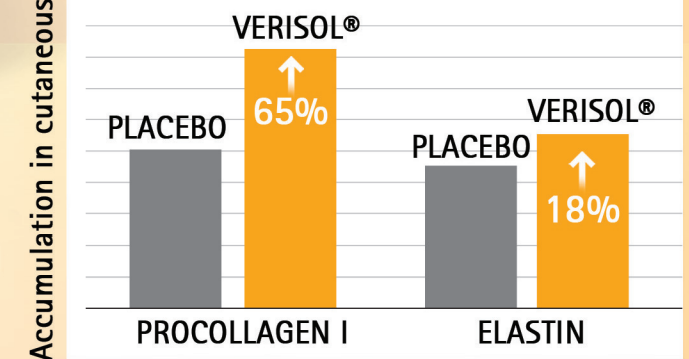

Impaired microcirculation
(fluid retention)

5 STRATEGIES TO DEAL WITH CELLULITE

- 1 Strengthen the dermal and subcutaneous matrix, stimulating **COLLAGEN** production
- 2 Reduce the formation of **FAT**
- 3 Increase **FAT** burning
- 4 Improve **MICROCIRCULATION**
- 5 Prevent and neutralize **FREE RADICALS**

EFFECT OF VERISOL® ON THE FORMATION OF COLLAGEN AND ELASTIN

VERISOL™
Beauty from Within

In a study with women between 45 and 65 years of age, the oral intake of **2.5g VERISOL®** Collagen daily for eight weeks improved skin elasticity and composition (due to increased collagen and elastin biosynthesis) significantly compared to placebo (see graphic). In another study, the oral intake of **2.5g VERISOL®** Collagen daily for six months significantly reduced the appearance of cellulite and improved skin surface structure.
